File Upload Guide

Your homework on this exercise will not be in the Judge system. Instead, you will have to upload a zip file to the SoftUni website.

You need to submit your project's folder containing your solutions to the exercise's problems, excluding the .idea and venv folders. If you want to change your solution for some of the problems, you must upload a new zip file. The most recent uploaded solutions will be kept.

You will have limited time for uploading your homework. If you've successfully uploaded it to the system, you will see the following button from where you could download your homework:

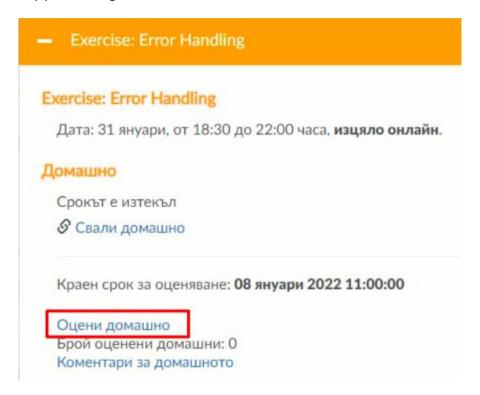

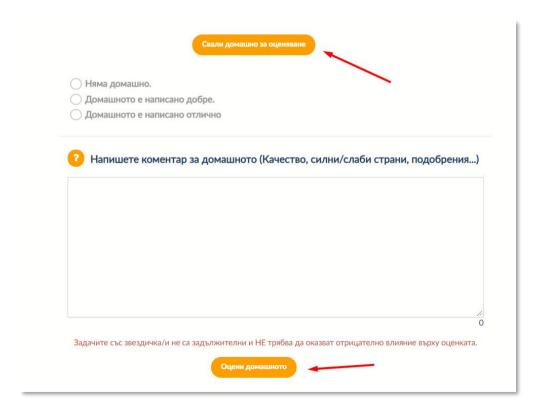

After the period for uploading homework ends, it will start a new period for reviewing and grading colleagues' homework. Your homework will be scored to the 5% bonus to your grade only if you review and grade at least three homework submitted by your colleagues.

When you click on the button to grade homework, the system will redirect to a review page. There, you will be able to download a colleague's file at random. You cannot continue to the next colleague's homework until you grade and review the given one.

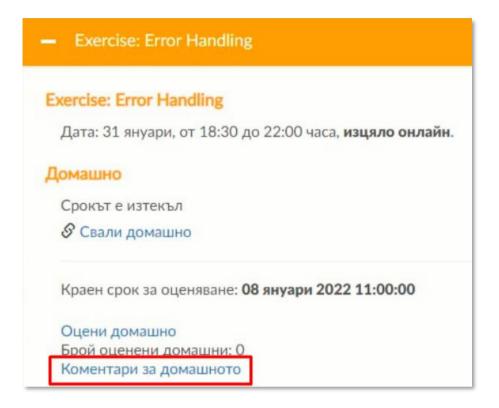

Also, you will be able to see all reviews from your colleagues and to evaluate them for correctness and usefulness:

You will be redirected to the following page:
